

- This project is designed using .NET MVC Framework, with C# (C-Sharp) as the object-oriented programming language, JQuery and JavaScript Framework.
-
- I used Microsoft SQL database engine, to handle the database, normalized from the share information.
-
- The database dump named “**UNHabitat_Projects.bak**” can be restored on any SQL Engine running SQL Server 16 and above.
-
- To run the application, we need to host it on IIS Server and change the Web Config File named as “**Web.Debug.config**”, which contains the details of the connection string to the database to match the new connection.

The GITHUB URL link to my files. (<https://github.com/bunyas/UN-Habitat-Project-Information>)
